Family Owned and Operated since 1938

Use

The gasoline paste is a light sky blue paste that turns a darker blue when immersed in gasoline, diesel, kerosene, naphtha, #2 heating oil, light crude oil, jet fuel and others.

Part #MC200

Application

Spread a smooth, even coat of the product on the bob or gauging device where you expect the air/product interface to be located. Once entering the product, leave immersed for approximately ten seconds and the paste will turn a darker blue. When reading the results, note a straight, sharp demarcation on the gauging device, light blue above/dark blue below.
